Experience

Software Development Intern – Velora Global

Aug – Sep 2026

- Built a full-stack, security-focused web application for an international client end-to-end, independently translating requirements into system architecture and API design.
- Designed and implemented RESTful backend services (Node.js, Express.js) with authentication, authorization, role-based access control (RBAC), middleware layers, and input validation for a production distributed system.
- Applied cryptographic hashing to protect sensitive data at rest, and implemented access-controlled data models (private circles, restricted visibility, friend-only invitations) to enforce fine-grained security boundaries.
- Debugged and tested backend services and data flows across the stack, resolving issues to ensure reliability, and delivered the completed platform with positive client feedback on security, functionality, and performance.

Projects

Restaurant QR Ordering System

[GitHub](#) 

- Built a full-stack, database-backed ordering and management platform (MERN stack) with a React/TypeScript-ready frontend and a Node.js/Express REST API backend.
- Designed relational-style data models and REST endpoints for authentication, catalog, order, and staff management, backed by MongoDB.
- Implemented JWT-based authentication, bcrypt password hashing, protected routes, and role-based authorization for Admin, Waiter, and Super Admin roles – mirroring enrollment/authentication patterns used in production security platforms.
- Implemented real-time order status updates and tracking with Socket.IO, and validated system behavior through manual and integration testing.
- **Technologies:** React.js, Node.js, Express.js, MongoDB, Mongoose, Socket.IO, JWT, REST APIs, Axios

Life-Link – Blood Donor Finder

[GitHub](#) 

- Built a web platform connecting recipients with compatible donors, with dedicated donor, recipient, hospital, and administrator workflows secured by role-based access.
- Designed and implemented REST APIs (Node.js, Express.js) backed by MongoDB for donor, recipient, and blood-request data management.
- Implemented a K-Nearest Neighbors (KNN) matching algorithm for donor recommendations, applying data-driven problem solving to a real-world matching task.
- **Technologies:** React.js, Node.js, Express.js, MongoDB, JWT, bcrypt, REST APIs

Technical Skills

Backend & APIs: Node.js, Express.js, RESTful API design, Middleware, Authentication & Authorization (JWT, RBAC), Hash Functions / Cryptography

Databases: MongoDB, Firebase, Supabase, Schema Design, Query Optimization

Frontend: React.js, JavaScript, TypeScript, Redux, Tailwind CSS, Bootstrap

Systems & Tools: Linux/Unix command line, Git/GitHub, Postman, Hoppscotch, Docker (familiar), Debugging & Log Tracing, Unit/Integration Testing, AI Agents

Education

Bachelor of Science in Computer Science and Information Technology

2022 – 2026

BSc CSIT

- Final-year undergraduate student
- Relevant coursework: Data Structures and Algorithms, Database Management Systems, Operating Systems, Software Engineering, Web Technology

Achievements & Certifications

- Delivered a client-facing secure web platform independently, from architecture and system design through deployment, earning positive client feedback.
- **Certifications:** Add relevant certifications such as Python, Go, Linux/Shell Scripting, Docker, Web Development, or Git/GitHub, if completed.
